EXP 8	Validation Workflow for Dates

Aim:

To validate that the End Date is after the Start Date and that the duration is at least 2 weeks.

Theory:

A validation workflow runs on form submission. alert shows a message and cancel submit stops the record from being saved.

Procedure:

1. Go to Workflow > New Workflow.
2. Choose form Internship, record event Created or Edited, form event Validations on form submission.
3. Name it Validate Internship Dates and click Create Workflow.
4. Add a Deluge script action with the script below and save.

Program (Validate Internship Dates):

```
// Internship - validation on form submission (Created or Edited)
if(input.Start_Date != null && input.End_Date != null)
{
    if(input.End_Date <= input.Start_Date)
    {
        alert "End Date must be after Start Date.";
        cancel submit;
    }
    if(input.Start_Date.daysBetween(input.End_Date) < 14)
    {
        alert "Internship duration must be at least 2 weeks.";
        cancel submit;
    }
}
```

Output:

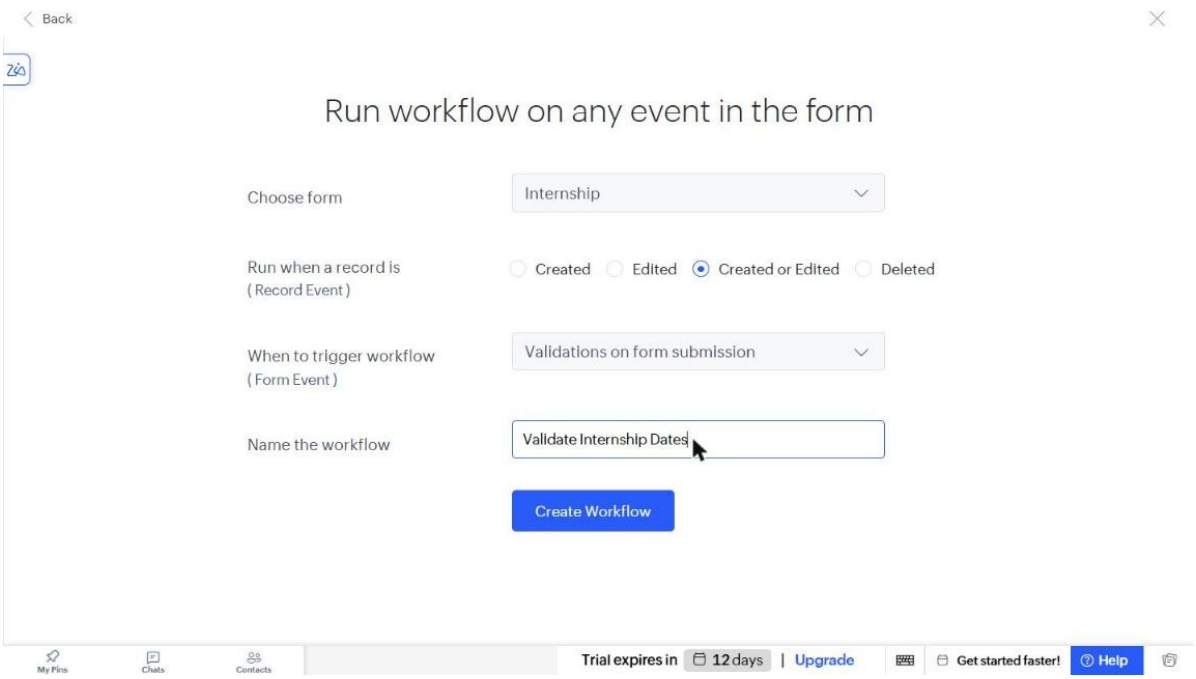

Fig. 8.1: Validation workflow configuration

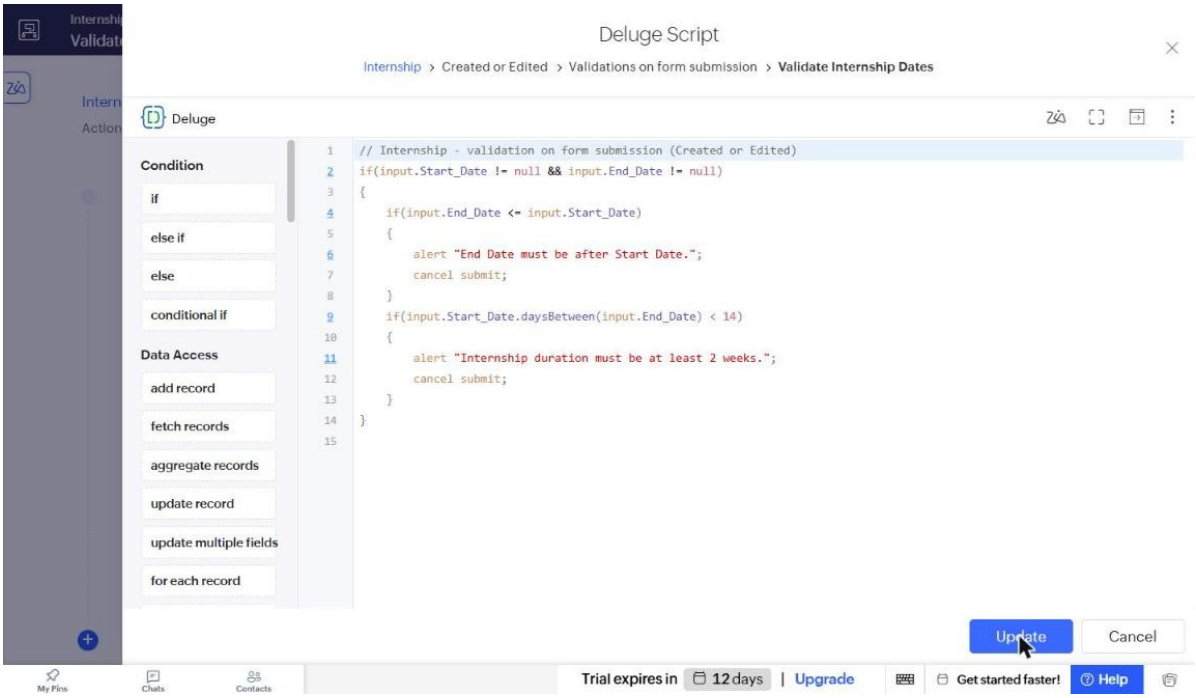

Fig. 8.2: Validate Internship Dates script

Result:

The validation workflow was created for the Internship form.
