EXP 11	Hiding the Completion Certificate on Form Load

Aim:

To hide the Completion Certificate field when the form opens unless the Status is Completed.

Theory:

show and hide are Deluge client functions that control the visibility of a field.

Procedure:

1. Create a workflow on Internship, Created or Edited, Load of the form, named Certificate On Load.
2. Add the Deluge script below and save.
3. Open the live form and check that Completion Certificate is not shown.

Program (Certificate On Load):

```
// Internship - show Completion Certificate only when Status is Completed
if(input.Status == "Completed")
{
    show Completion_Certificate;
}
else
{
    hide Completion_Certificate;
}
```

Output:

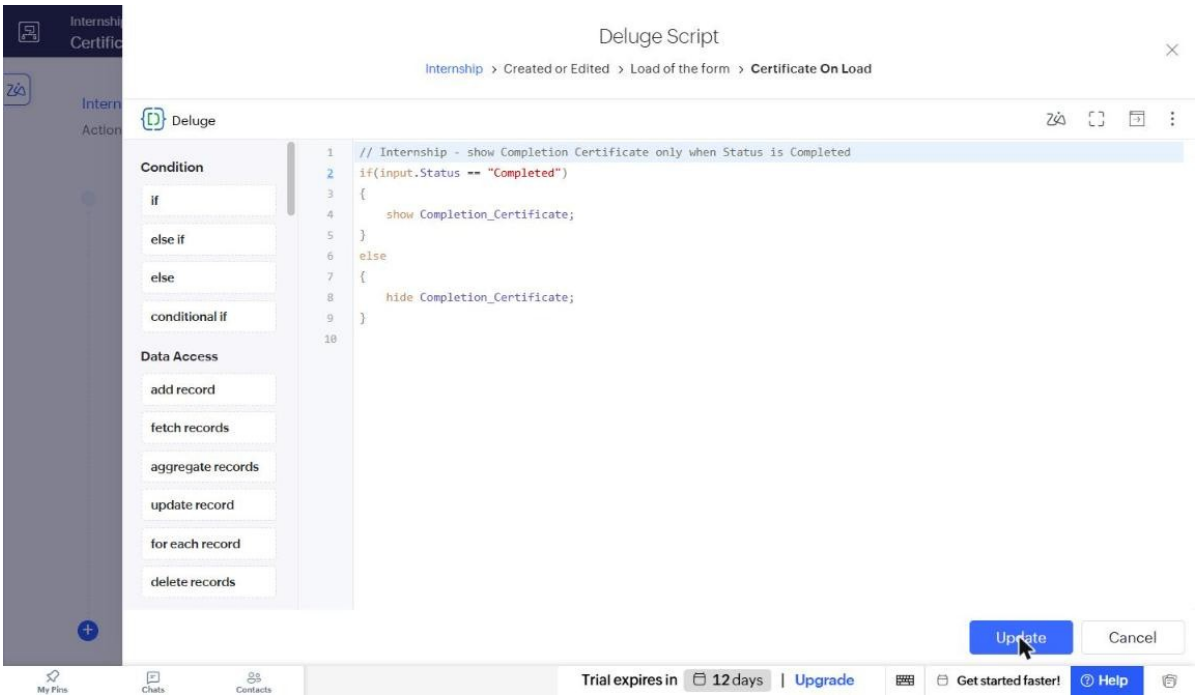

Fig. 11.1: Certificate On Load script

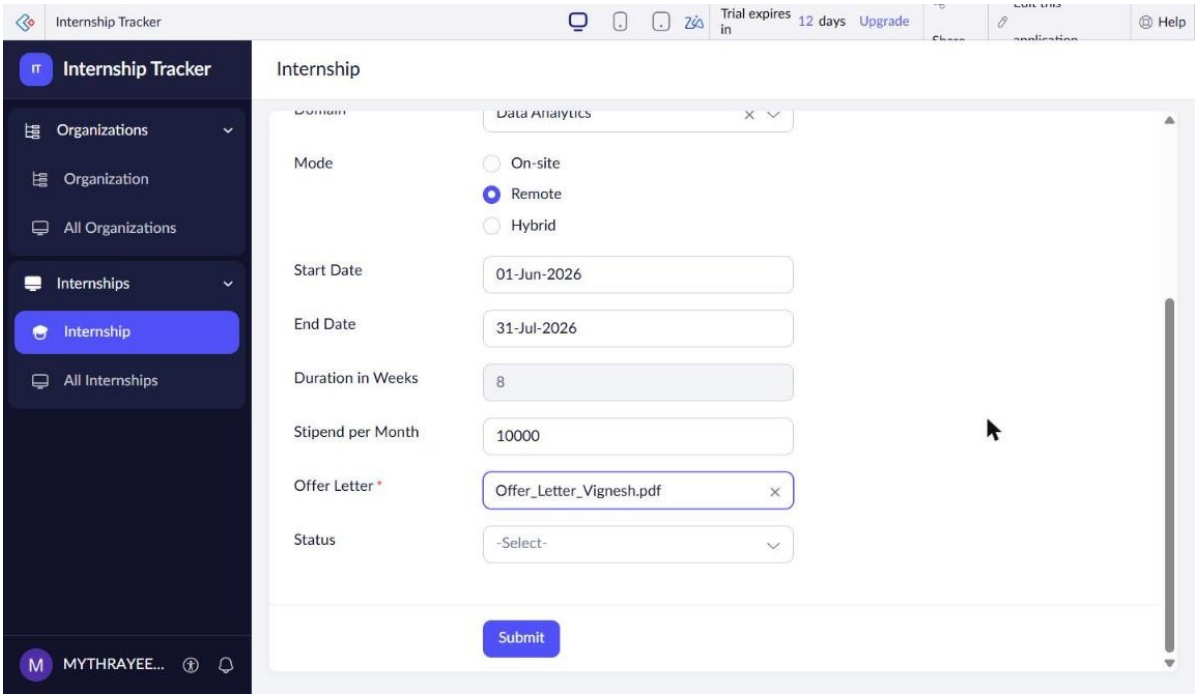

Fig. 11.2: Completion Certificate hidden before Status is chosen

Result:

The Completion Certificate field is hidden when the form loads.
