EXP 12	Showing the Completion Certificate When Status is Completed

Aim:

To show the Completion Certificate field only after Status is set to Completed.

Theory:

A User input of a field workflow runs every time the selected field changes.

Procedure:

1. Create a workflow on Internship, Created or Edited, User input of a field, field Status, named Certificate On Status Change.
2. Add the same show/hide script and save.
3. In the live form choose Status = Completed.

Program (Certificate On Status Change):

```
// Internship - show Completion Certificate only when Status is Completed
if(input.Status == "Completed")
{
    show Completion_Certificate;
}
else
{
    hide Completion_Certificate;
}
```

Output:

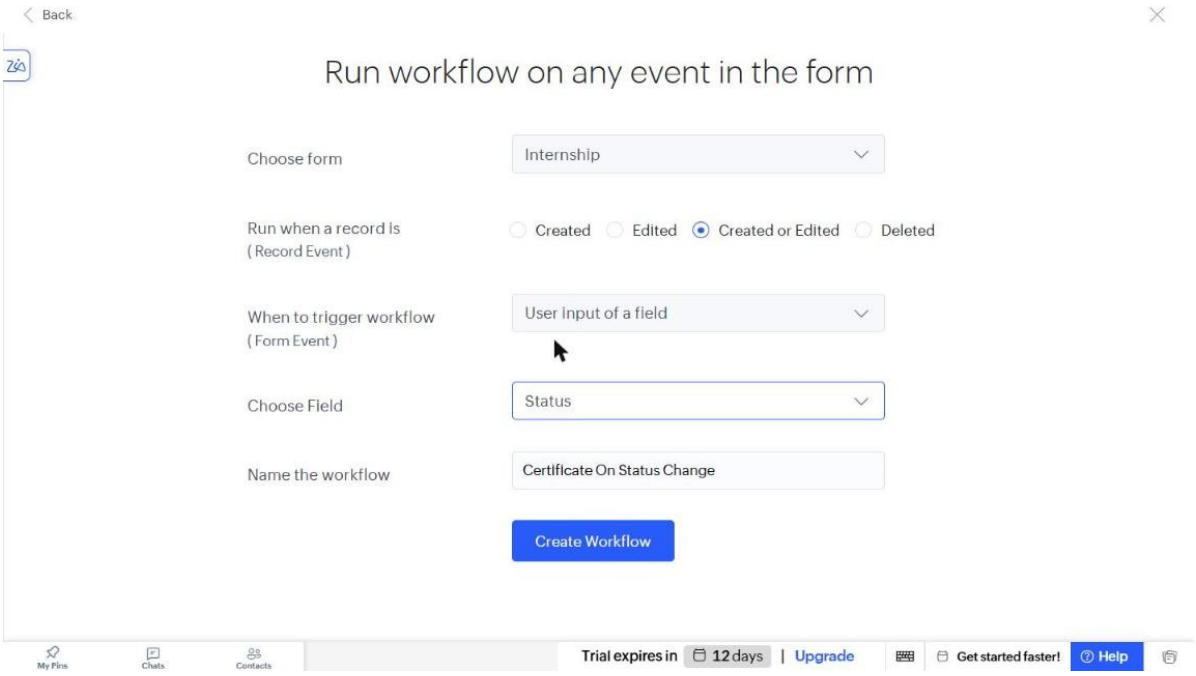

Fig. 12.1: User input of Status workflow configuration

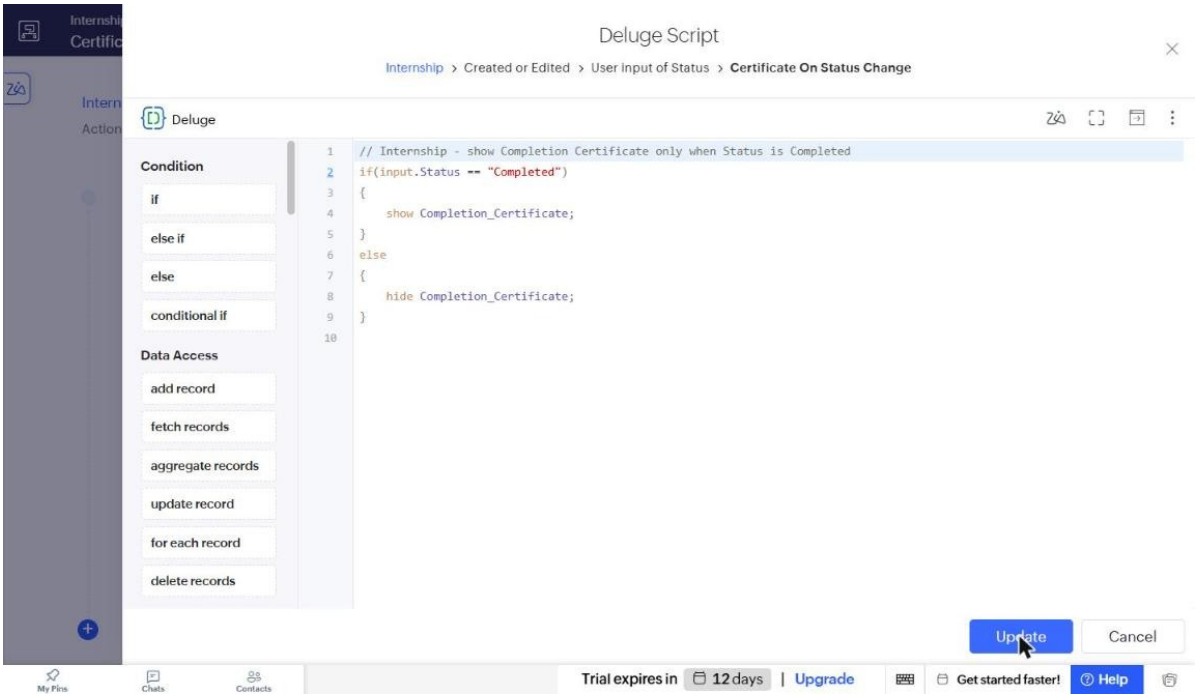

Fig. 12.2: Certificate On Status Change script

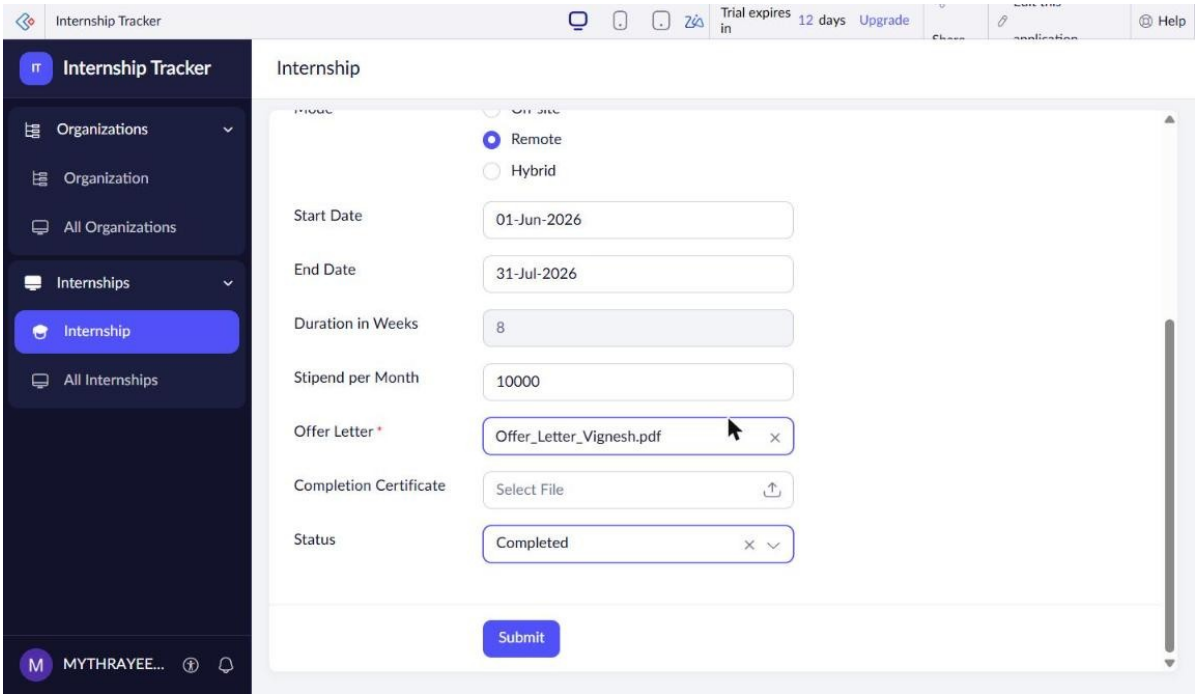

Fig. 12.3: Completion Certificate appears after choosing Completed

Result:

The Completion Certificate field appears only after choosing Completed.
